Abstract

A single paragraph of 250 words maximum. For research articles, abstracts should give a pertinent overview of the work. We strongly encourage authors to use the following style of structured abstracts, but without headings: (1) Background: place the question addressed in a broad context and highlight the purpose of the study. (2) Methods: briefly describe the main methods or treatments applied. (3) Results: summarise the article's main findings. (4) Conclusions: indicate the main conclusions or interpretations. The abstract should be an objective representation of the article and it must not contain results that are not presented and substantiated in the main text and should not exaggerate the main conclusions. State explicitly what the work contributes to ecosystem intelligence, and, where the work has an engineering, computing or technology contribution, make that visible here as well.

Keywords: keyword 1; keyword 2; keyword 3 (list three to eight pertinent keywords specific to the article yet reasonably common within the subject discipline). At least one keyword should locate the work within the scope of the journal.

---

0. How to Use This Template

This template must be used for all submissions to Ecosystem Intelligence. Manuscripts that do not use the template, or do not follow its formatting requirements, will be returned before editorial assessment.

Replace the example text with your own content while retaining the supplied styles and formatting. Do not redesign the title block, headings, figures, tables, equations, references or declarations.

Fields shown in the grey "Editorial Office Use Only" box, together with the journal header, footer, DOI and eISSN fields, are completed by the Editorial Office after acceptance and must not be edited by authors.

Delete instructional text marked [Author instruction . . .] before submitting the manuscript, and delete this section: your manuscript begins at Section 1.

Provide the complete affiliation for every author in the format shown above — department, institution, city and country, an institutional e-mail address and an ORCID iD. Do not change the order, labels or formatting of the author and affiliation block. Give one corresponding author only.

Write the title, abstract and keywords in English and give all bibliographic information in Roman script. Keep to the word limit for your article type, excluding the reference list: Research Article 7,000–12,000; Review Article 8,000–15,000; Conceptual Article 7,000–12,000; Methodological Article 7,000–12,000; Perspective and Vision Paper 3,000–6,000; Editorial, as agreed with the editors. Every type except Editorials requires an abstract of no more than 250 words and three to eight keywords. To switch on line numbering for the review version, load the class as `\documentclass[review]{ecosysint}`. Questions: submissions@ecosystemintelligence.academy.

Research Articles should normally follow Sections 1–5 below. Review Articles, Conceptual Articles, Methodological Articles, and Perspective and Vision Papers may adapt Sections 2–5 to suit the article type while retaining the journal's heading styles and numbering.

1. Introduction

The introduction should briefly place the study in a broad context and highlight why it is important. It should define the purpose of the work and its significance. The current state of the research field should be carefully reviewed and key publications cited. Please highlight controversial and diverging hypotheses when necessary. Finally, briefly mention the main aim of the work and highlight the principal conclusions. As far as possible, please keep the introduction comprehensible to scientists outside your particular field of research.

Sources are cited in author–date form following APA 7th edition. A work by one author is cited as (Author, 2023); by two authors as (Author & Author, 2024), using an ampersand inside the parentheses and "and" when the names run on in the sentence: Author and Author (2024) showed that…; and by three or more authors as (Author et al., 2025). Two or more works cited at the same point go inside a single pair of parentheses, ordered alphabetically as in the reference list and separated by semicolons (Author, 2023; Author & Author, 2024; Author et al., 2025). Several works by the same author are combined and ordered by year, and works by the same author in the same year are distinguished by letters. For a direct quotation, add the page number (Author, 2023, p. 12). See the References section for the corresponding list format.

2. Materials and Methods

The Materials and Methods should be described with sufficient detail to allow others to replicate and build on the published results. New methods and protocols should be described in detail while well-established methods can be briefly described and appropriately cited.

Research manuscripts reporting large datasets that are deposited in a publicly available database should specify where the data have been deposited and provide the relevant accession numbers.

Interventionary studies involving animals or humans, and other studies that require ethical approval, must list the authority that provided approval and the corresponding ethical approval code.

Where generative artificial intelligence or AI-assisted tools form part of the methodology — for example in study design, data generation, data collection, analysis or interpretation — describe that use here as you would any other method, naming the tool and its version. Formal disclosure of AI use is made in the Use of Generative AI statement.

3. Results

This section may be divided by subheadings. It should provide a concise and precise description of the results, their interpretation, and the conclusions that can be drawn.

3.1. Subsection

3.1.1. Subsubsection

Bulleted lists look like this:

- First bullet;
- Second bullet;
- Third bullet.

Numbered lists can be added as follows:

1. First item;
2. Second item;
3. Third item.

The text continues here.

Formatting examples: figures, tables and schemes

[Formatting example — delete this heading and any unused examples before submission. Copy the example you need into the relevant part of your manuscript.]

All figures and tables should be cited in the main text as Figure 1, Table 1, and so on.

Figures, tables or extended quotations reproduced or adapted from a copyrighted source require written permission from the rights holder before acceptance, and the source must be credited in the caption, for example “Reproduced from Author (2024) with permission”. Because articles are published under CC BY 4.0, material that cannot be licensed on those terms cannot be included.

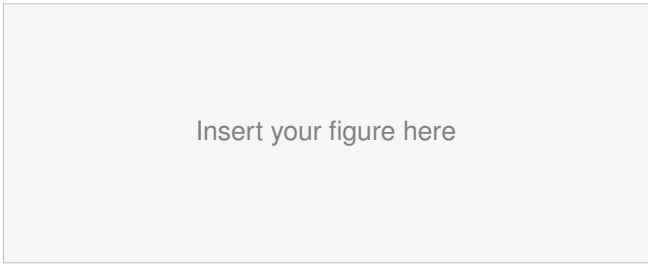

Figure 1. This is a figure. Schemes follow the same formatting.

Table 1. This is a table. Tables should be placed in the main text near the first time they are cited.

Title 1	Title 2	Title 3
entry 1	data	data
entry 2	data	data[1]

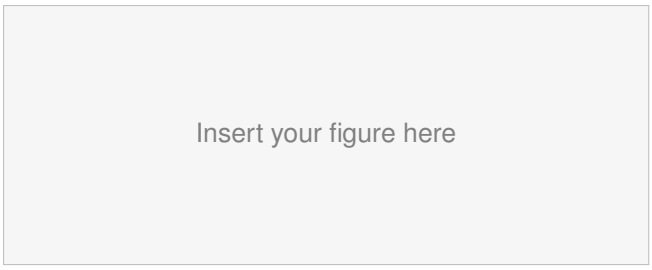

[1] Tables may have a footer.

A multi-panel figure and a table with merged cells follow.

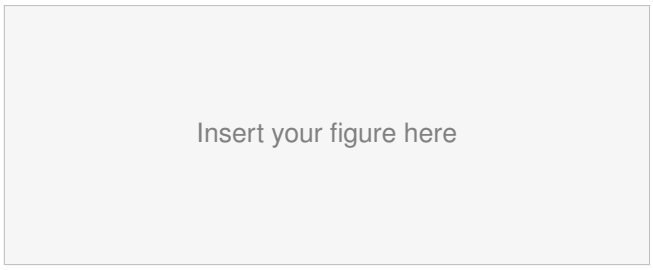

Table 2. This is a table with merged cells.

Title 1	Title 2	Title 3	Title 4
entry 1 *	data	data	data
	data	data	data
entry 2	data	data	data
	data	data	data

* Tables may have a footer.

(**a**)

(**b**)

Figure 2. This is a figure. If there are multiple panels, they should be listed as follows: (**a**) description of what is contained in the first panel; (**b**) description of what is contained in the second panel.

Formatting examples: equations, theorems and proofs

[Formatting example — delete this heading and any unused examples before submission. Copy the example you need into the relevant part of your manuscript.]

This is example 1 of an equation:

$$a = 1, \tag{1}$$

the text following an equation need not be a new paragraph if it continues a sentence. Please punctuate equations as regular text.

This is example 2 of an equation:

$$a = b + c + d + e + f + g + h + i + j + k + l + m + n + o + p + q + r + s + t + u + v + w + x + y + z \tag{2}$$

If the text following an equation starts a new sentence, it should be a new paragraph.

Theorem-type environments (including propositions, lemmas and corollaries) are formatted as follows:

> **Theorem 1.** *Example text of a theorem. Theorems, propositions and lemmas should be numbered sequentially (Proposition 2 follows Theorem 1). Examples and Remarks use the same formatting but are numbered separately, so a manuscript may contain Theorem 1, Remark 1 and Example 1.*

Proofs are formatted as follows:

> **Proof of Theorem 1.** Text of the proof. The phrase “of Theorem 1” is optional if it is clear which theorem is being referred to. Always finish a proof with the following symbol. □

4. Discussion

Authors should discuss the results and how they can be interpreted from the perspective of previous studies and of the working hypotheses. The findings and their implications should be discussed in the broadest context possible, and the limitations of the work should be stated explicitly. Future research directions may also be highlighted.

5. Conclusions

This section is not mandatory but can be added to the manuscript if the discussion is unusually long or complex.

Supplementary Materials (if applicable)

The following supplementary materials are available at [DOI or persistent URL]: Figure S1: [title]; Table S1: [title]; Video S1: [title]; Dataset S1: [description]; [other supplementary item: description].

[Author instruction: Complete this section only if supplementary materials accompany the article. Ecosystem Intelligence and Tidsskrift.dk do not host supplementary files. Authors must deposit supplementary materials in a reliable external repository and provide the repository name and a stable public link, preferably a DOI or other persistent identifier. All supplementary items must be cited in the main text and accessible at the time of submission and publication. Delete this section if not applicable. Delete this instruction before submission.]

Author Contributions

Contributions are described with the fourteen roles of the CRediT taxonomy (ANSI/NISO Z39.104-2022, https://credit.niso.org/). Use the role names exactly as given there, each followed by the initials of the authors concerned; an author may hold several roles and a role may be shared. Omit any role that does not apply. Authorship is limited to those who contributed substantially to the work reported and who approve the submitted version; anyone else — technical assistance, language editing, provision of materials or funding administration only — should be named in the Acknowledgments instead.

Example: Conceptualization, A.B. and C.D.; Methodology, A.B.; Software, C.D.; Validation, A.B., C.D. and E.F.; Formal analysis, A.B.; Investigation, C.D.; Resources, E.F.; Data curation, C.D.; Writing – original draft, A.B.; Writing – review & editing, C.D. and E.F.; Visualization, A.B.; Supervision, E.F.; Project administration, A.B.; Funding acquisition, E.F. All authors have read and agreed to the published version of the manuscript.

Where two or more authors contributed equally, state this here, for example: “A.B. and C.D. contributed equally to this work.” Changes to authorship after submission require the written agreement of all authors.

Funding

State either “This research received no external funding” or “This research was funded by NAME OF FUNDER, grant number XXX”. Give the funder’s full registered name and the grant number exactly as awarded; the standard spelling of funder names can be checked at https://search.crossref.org/funding.

Institutional Review Board Statement

For studies involving humans or animals, state the approving board, the approval code and the date, or state “Not applicable”. Where approval was waived, state by whom and why.

Informed Consent Statement

Any research article describing a study involving humans must contain this statement: “Informed consent was obtained from all subjects involved in the study.” Where individuals are identifiable, written consent to publish is required. Otherwise state “Not applicable”.

Data and Code Availability Statement

A data availability statement is mandatory, except for Editorials. State where the data supporting the reported results can be found, including links to publicly archived datasets and their persistent identifiers, or explain why the data cannot be shared.

Software, models and analysis code underpinning the results should be deposited in a public repository under an open licence, and the statement must give the repository, the version and the persistent identifier, for example: “The analysis code is available at https://doi.org/10.xxxx/zenodo.xxxxx (v1.0, MIT licence).” Deposited datasets and code are also cited in the reference list.

Use of Generative AI

This statement is mandatory. State whether generative artificial intelligence or AI-assisted technologies were used in the preparation of the work, naming the tool and its version and describing what it was used for, or state “Not applicable”.

Example: “During the preparation of this manuscript the authors used [tool, version] for [purpose]. The authors reviewed and edited the output and take full responsibility for the content of this publication.” AI tools cannot be listed as authors, cannot be cited as a source of scientific evidence, and their use for superficial language editing need not be declared.

Acknowledgments

Acknowledge any support that is not covered by the author contributions or funding sections, such as administrative or technical support, or donations in kind. Written permission should be obtained from anyone named here.

Conflicts of Interest

Declare conflicts of interest or state “The authors declare no conflicts of interest.” Any role of the funders in the design of the study; in the collection, analysis or interpretation of data; in the writing of the manuscript; or in the decision to publish the results must be declared in this section. If there is no role, please state so. Where an author holds an editorial role at the journal, record it here, for example: “X.X. is an Editor of Ecosystem Intelligence and took no part in the decision on this manuscript.”

Abbreviations

The following abbreviations are used in this manuscript:

ABM	Agent-based model
IoT	Internet of Things
LCA	Life-cycle assessment
ML	Machine learning

Appendix

Appendix A

The appendix is optional and may contain details supplemental to the main text — for example, extended derivations, additional experimental detail, or supporting figures and tables. All appendix sections must be cited in the main text. Figures, tables and equations in the appendices are labelled starting with “A”: Figure A1, Table A1, Equation (A1).

Table 3. This is a table caption.

Title 1	Title 2	Title 3
entry 1	data	data
entry 2	data	data

Appendix B

Where there are several appendices, each is a separate heading at this level.

References

References follow the Publication Manual of the American Psychological Association, 7th edition (APA 7th). The list is arranged alphabetically by the surname of the first author, is not numbered, and uses a hanging indent. List up to 20 authors; for 21 or more, give the first 19, then an ellipsis, then the final author. Include the DOI of every source that has one, written as a full https://doi.org/ link. Citations that appear only in the Supplementary Materials must also be listed here. Cite sources because they are relevant to your argument.

Ecosystem Intelligence never requires citations to itself as a condition of acceptance, and authors are free to decline a reviewer's suggestion to add references, including to the reviewer's own work.
