Behavioural response of breeding Mute Swans
Cygnus olor to lockdown measures: a case study

Table S1. Breeding performance of the Mute Swan pairs on occupying new territories at the two study sites in central Poland: the Sarnów fish farm (a private complex of fishponds) and Sulejowski Reservoir (a recreational area). Bold font indicates the year of the Covid-19 pandemic (*i.e.* 2020).

Year	Site	Number of new territories	First egg-laying date (median)	Clutch size (mean ± s.e.)
2015	Fish farm	1	14 April	6.0
	Reservoir	0	—	—
2016	Fish farm	4	2 April	6.2 ± 0.5
	Reservoir	0	—	—
2017	Fish farm	1	30 April	2.0
	Reservoir	0	—	—
2018	Fish farm	3	9 April	6.6 ± 0.9
	Reservoir	3	16 April	5.3 ± 1.2
2019	Fish farm	2	4 April	5.5 ± 0.5
	Reservoir	3	10 April	5.7 ± 0.6
2020	Fish farm	2	1 April	5.5 ± 1.5
	Reservoir	9	24 April	5.1 ± 0.3
2021	Fish farm	3	27 April	5.3 ± 0.3
	Reservoir	1	24 April	5.0
2022	Fish farm	4	23 April	6.0 ± 0.7
	Reservoir	3	24 April	4.3 ± 1.3
