INTRODUCTION

The bird ringing in Greenland is of interest for many reasons, mainly because Greenland is the only, or at least one of the very few, arctic countries in which regular bird ringing takes place. The Greenland bird ringing system, its history and development, has been described by me in various papers (SALOMONSEN 1956a, p. 258; 1956b, p. 130, and 1966, p. 88).

The bird ringing takes place as a joint enterprise by the Ministry for Greenland and the Zoological Museum, University of Copenhagen. In order to encourage the work a reward is paid for each bird ringed, as well as for the recovery of ringed birds. For each bird shot, caught or found dead, 2 Kroner are paid if the ring together with the foot is delivered to the local magistrate. He records the number of the ring, the date, locality and mode of death, and the name of the recoverer, and then sends the material to the Zoological Museum in Copenhagen. The reason for collecting the foot of the bird, which is not the usual procedure in bird ringing, is to provide a check on the identity of the bird without having to rely entirely on the knowledge of the bander.

Lists of birds ringed, as well as total number of recoveries within each species, are regularly issued in the periodical "Beretninger vedrørende Grønland", and the recoveries abroad of birds ringed in Greenland are given in "Dansk Ornithologisk Forenings Tidsskrift" (*cf.* list of references in SALOMONSEN 1956a, p. 264, and 1967, p. 14). Among the birds recovered in Greenland are also a number of specimens ringed in other countries. The rings and feet of these birds are handed by the shooter to the local magistrate, mostly in order to obtain the usual reward for recovered birds. Together with other recoveries these foreign birds are delivered to the Zoological Museum which then gets in touch with the place of ringing for closer details. In this way the Zoological Museum in Copenhagen has amassed a large amount of information on foreign birds recovered in Greenland. As the countries which have undertaken the ringing have published lists on very few of these recoveries, they are collected in this paper. To the great majority of ringed birds which have been sent to the Zoological Museum are added a few which have been sent directly from the shooter (who did not then, obtain a reward) to the

foreign ringing office and subsequently published. However, such rings constitute less than 2 percent of the whole lot. I have recently used the previously unpublished data on the recoveries of foreign birds in my work on the Greenland birds (SALOMONSEN 1967), and therefore now wish to have all these records collected in a published list.

In the following list of recoveries the individual birds are mentioned in a sequence according to the ringing station. The following abbreviations are used, the letter in question being placed in front of the ring number in the list:

- H. = Heligoland, Germany
- L. = London, England
- W. = Washington, D.C., U.S.A.
- He. = Hiddensee, Germany
- M. = Moskow, U.S.S.R.
- Rk. = Reykjavik, Iceland
- Vi. = P. Skovgaard, Viborg, Denmark
- P. = Paris, France
- Stv. = Stavanger, Norway
- Ås. = Statens Viltundersøkelser, Ås, Norway
- Oslo = University, Oslo, Norway
- A. = Arnhem, Holland
- C. = Copenhagen, Denmark.

When more than a few birds of the same species have been ringed by one of the stations, the individual birds are mentioned according to the place of recovery, in a north-south direction along the Greenland coasts.

Although all places of recovery have been supplied with their geographical coordinates, in order to save space, the Greenland districts have been abbreviated as follows:

- Nan. = Nanortalik District, W. Greenland
- Jul. = Julianehåb - -
- Frd. = Frederikshåb - -
- Godt. = Godthåb - -
- Suk. = Sukkertoppen - -
- Holst. = Holsteinsborg - -
- Egm. = Egedesminde - -
- Chr. = Christianshåb - -
- Godh. = Godhavn - -
- Jak. = Jakobshavn - -
- Umk. = Umanak - -

Upv. = Upernavik District, W. Greenland
 Thule = Thule - -
 Angm. = Angmagssalik District, E. Greenland
 Sco. = Scoresby Sund - -

Finally, it must be mentioned that the modern international system of recording recoveries has been followed. According to this system the following symbols have been used:

pull. = Bird not yet flying
 juv. = Young bird able to fly freely
 ad. = Adult or full-grown bird
 ♂ = Male
 ♀ = Female
 + = Shot or killed by man
 x = Found dead or dying
 x(m) = Found as mummy or skeleton (s)
 v = Controlled and released with ring
 () = Controlled and released without ring
 /?/ = Manner of recovery unknown
 (22.10.1962) = Date of recovery unknown; date of letter used.

I wish to express my sincere thanks to Mr. PELLE ANDERSEN-HARILD, who kindly has compiled all recoveries and furnished all geographical places with their proper coordinates, and to Mr. N. O. PREUSS, cand. mag., leader of the Danish bird ringing station at the Zoological Museum in Copenhagen, for various aid rendered.
