# Preface

*Proceedings of the Danish Institute at Athens* (PoDIA) is a periodical that is scheduled to appear every second year. It publishes results of Danish archaeological field work in Greece and the Eastern Mediterranean, and studies by Danish and foreign scholars working within the same thematic and geographical field of research. The periodical is, in addition, open to scholars in fields of study concerned with the ancient world other than archaeology. Guidelines for the publications of the Danish Institute publications can be found on our homepage [www.diathens.com](http://www.diathens.com) under “publications”. Manuscripts should be addressed to:

The Director  
The Danish Institute at Athens  
Herefondos 14,  
GR-105 58 Greece

Regarding the present volume, all papers have had one or more peer reviews as will all papers in the future. We wish to thank the anonymous peer reviewers for their time and effort, which has

greatly improved the outcome of this volume. We also wish to thank the former assistant director of the Institute, MA Jesper Tae Jensen, for collecting many of the contributions. As far as the publication is concerned, we would like to stress that, paradoxically, in this digital world it is not always possible to acquire images of a high enough quality for optimal printing. Many images have been returned to the authors with a request for new images of a higher resolution or for the original images to be submitted for new scans – often with good results. We wish to thank the authors for their patience with our requests.

The publication was sponsored by Nordea-fonden. We are extremely grateful to them for their generous contribution.

Athens, November 2009  
*Erik Hallager & Sine Riisager*
